September, 2018

#### **Overview**

The Child Care Development Block Grant Reauthorization Act of 2014 (CCDBG) requires Lead Agencies every three years to conduct a market rate survey or employ an alternative methodology to inform provider reimbursement rates.

New Jersey Department of Human Services, Division of Family Development (DHS/DFD) is the Lead Agency and funded this market rate survey study to be compliant with the federal requirement authorized by the CCDBG.

The market rate survey is designed to inform the DHS/DFD of the locally representative child care prices and other information on the local child care market relevant to the Child Care Subsidy Program; as well as yield a better understanding of the price at which equal access to high quality child care can be achieved for families receiving a subsidy. The table below provides a snapshot of the study's major findings.

#### **Major Findings from the Survey**

	Infant	Toddlers	Preschoolers	School-Age
Number				
Licensed centers	908	1,066	1,432	1,094
Maximum slots	14,732	23,792	65,178	
Enrollment	10,136	17,492	51,990	19,407
75 <sup>th</sup> percentile price(\$) for Full-Time Care				
Weekly	306	275	252	
Monthly	1,300	1,195	1,055	
Weekly 75 <sup>th</sup> percentile price (\$) by price clus	ter			
Cluster 1	215	190	175	71
Cluster 2	250	235	215	100
Cluster 3	308	279	254	130
Cluster 4	384	358	354	242
Monthly 75 <sup>th</sup> percentile price (\$) by price clu	ster			
Cluster 1	895	758	650	275
Cluster 2	1,100	980	869	400
Cluster 3	1,313	1,185	1,058	500
Cluster 4	1,663	1,550	1,490	788
Monthly 75 <sup>th</sup> percentile price (\$) by quality in	ndicator			
Participate in GNJK	1,226	1,126	1,057	
Accredited	1,536	1,516	1,230	
Percent participating in state subsidy	77.42	73.17	69.48	82.82

### I. Background & Purpose

#### Policy Background and Study Purpose

This study was funded by New Jersey Department of Human Services, Division of Family Development in its effort to be compliant with the federal requirement authorized by the Child Care and Development Block Grant (CCDBG) Reauthorization Act of 2014. The Act, pursuant to 45 CFR Part 98 and the Child Care Development Fund (CCDF) final rule requires Lead Agencies to conduct a child care market price study or a cost-estimation model every three years to collect and examine provider price data to guide States in setting payment rates to promote equal access to the full range of child care services, including high-quality child care and support a basic level of health, safety, and quality.

To ensure equal access, the Reauthorization Act specifies that a market price study must reflect variations in the cost of child care services by geographic area, type of provider, and age of child. The Reauthorization Act also proposed that states set base payment rates at least at a level sufficient for child care providers to comply with the health, safety, and quality requirements and ensure equal access to child care available to families not receiving a child care subsidy.

As benchmark for equal access, the Reauthorization Act reaffirms in the preamble to the 1998 Final Rule (63 FR 39959), available at <a href="https://www.gpo.gov/fdsys/pkg/FR-2015-12-24/pdf/2015-31883.pdf">https://www.gpo.gov/fdsys/pkg/FR-2015-12-24/pdf/2015-31883.pdf</a>) the 75th percentile as a benchmark for gauging equal access. The Reauthorization Act also mandates that states use a market price study to examine the adequacy of their subsidy payment rates, to identify access barriers related to prices, and to develop subsidy payment rates that consider the cost of providing higher quality child care services.

Additionally, the Reauthorization Act of 2014 recommends that state market price studies be used to investigate shortages of quality child care and identify geographic areas with a supply shortage issue. Some local child care markets, particularly a more rural, may experience a unique supply shortage problem which States are encouraged to identify those and address the supply shortage issues.

With the above background, this study was intended to fulfill the following goals in examining child care prices prevalent in the licensed market.

- To collect current provider price data collection to inform setting payment rates.
- To estimate representative child care prices (i.e., 75<sup>th</sup> percentile prices) by child age group and pricing mode, while weighting the prices with the number of maximum licensed child care slots in the estimations.
- To explore price clusters, or groupings, that reflect geographic variations in child care prices and examine the ranges of prices by cluster for each age group.
- To examine the adequacy of the State's child care subsidy rates by calculating the percentages of child care slots accessible with the subsidy rates.
- To identify and describe geographic areas with limited number of licensed childcare centers.

#### Study Team and Process

This study was conducted by a research team led by the principal investigator (P.I.), a tenured faculty researcher of the Rutgers School of Social Work. The team was comprised of two tenured faculty researchers (P.I and co-P.I. of the study) and three research assistants (two PhD level research assistants and one Master level research assistant).

The P.I. and co P.I., with the consultation of Department of Human Services, Division of Family Development, Office of Child Care, developed and tested the survey instrument for this study and made the instrument available online by creating the survey site on Rutgers Qualtrics: https://rutgers.qualtrics.com/jfe/form/SV 1CfKvaRYE4wWiHP.

The Qualtrics online survey required respondents' email addresses. The Office of Child Care compiled the email addresses of child care centers and created separate county-by-county provider email lists. In November 2017, the staff of the Office of Child Care distributed the Qualtrics survey link to the centers and repeatedly followed up via email and phone calls to increase the survey response rate.

Rutgers and the Office of Child Care staff coordinated efforts and employed multiple outreach efforts, inclusive of collaborating with the Child Care Resource and Referral (CCR&Rs), Office of Licensing and Department of Education to increase the survey response rate and obtain additional information to investigate capacity, accessibility and supply.

To obtain a valid response rate, providers received multiple communications through various methods, emails, phone calls, letters, flyers and announcements via websites and meetings. The Rutgers research team also identified and communicated non-responsive providers on a weekly basis to increase and target outreach efforts.

While the data collection was being collected via online survey, Rutgers research team performed preliminary data cleaning and designed and conducted a child care supply shortage study. Geospatial mapping of child care providers was done at this stage to aid supply shortage study and data presentation.

#### II. Analysis

#### **Section 1: Survey Response Rate**

The universe of this provider data study came from the list of a total of 3,910 child care centers licensed by the Office of Licensing across New Jersey in 2017. Approximately 92.35% (3,611 centers) was contacted for the Qualtrics survey for this study. Of those, 2,132 centers (approximately 60% of 3,611 centers) participated in the survey. Two hundred fourteen centers were deemed ineligible for this study and removed from the analysis as they were public free and/or Head Start programs that did not charge child care service fees. This left 1,918 licensed child care centers (53% of 3,611 centers) eligible for the analytic sample of this study.

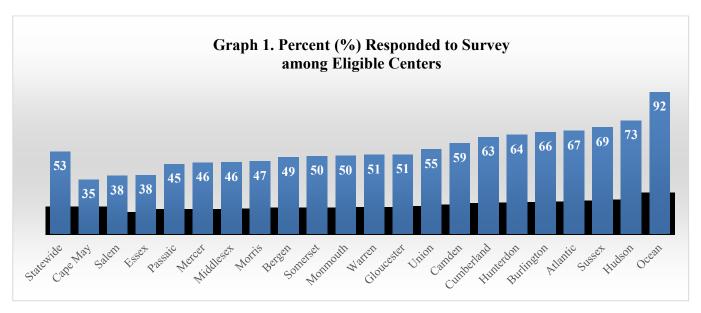

Of the 1,918 centers, approximately 94% (1,804 centers) completed the survey, and close to 76% (1,370 centers) provided at least one price data in the survey. **Table 1 in Appendix A** presents the survey data of providers that responded by county.

#### Survey Response Variations

There were large variations by county in (1) the number of child care centers, (2) the percentage of those contacted for the survey, (3) the survey response rate, and (4) the percentage of centers that provided at least one price. For example, three counties – Essex, Bergen, and Hudson Counties- had as many as 464, 423, and 337 licensed centers listed on the Office of Licensing list while counties such as Salem and Cape May had only 24 and 27 centers, respectively.

The percentage of centers contacted for this survey ranged from as low as 74% in Cape May County (20 out of 27 centers were contacted) and as high as 99% (205 of 207 centers) in Camden County or 100% (24 out of 24 centers) in Salem County.

The survey response rate of eligible licensed centers varied substantially by county, for example, 35% in Cape May County and 38% in Salem County to 91.67% for Ocean County. **Graph 1** visualizes the survey responses by county.

Of all eligible centers that responded to the survey (N=1,918) 908 centers served infants, 1,066 centers served toddlers, 1,432 centers served preschoolers and 1,094 centers served school-age children. More than 90% of centers that served infants, toddlers, and preschoolers provided at least one price data. See **Table 2 Appendix A** for details.

#### **Section 2: Slots and Enrollment**

#### Slots

Office of Licensing (OOL) data which represents 3,611 licensed child care centers indicate a total of 351,461 slots in licensed child care centers across the state; whereas the survey data of 1,918 providers reflects 29% or 103,702 slots in licensed child care centers across the state that responded to the survey.

The breakdown of 103,702 slots by age group was 14,732 (14.2%) for infants, 23,792 (22.9%) for toddlers and 65,178 (62.9%) for preschoolers. The data indicate a significant number of licensed slots for preschoolers (65,178) than for infants (14,732). The data indicates that there were nearly 5 times more licensed child care slots for preschoolers (N=65,178) than for infants (N=14,732). More than 46% of the combined age group slots were in five counties: Bergen (N=11,739), Essex (N=10,164), Union (N=9,499), Ocean (N=8,583) and Hudson (N=7,910); compared to only slightly more than 3% of the combined age group slots were in: Cape May (N=378), Salem (N=331), Warren (N=919), Cumberland (924) and Hunterdon (1,009).

In licensed child care centers across the state that responded to the survey, a total of 103,702 slots represented all the combined age groups (excluding school-age) of which 79,618 were enrolled. The enrolled breakdown by age group was 10,136 for infants, 17,492 for toddlers and 51,990 for preschoolers.

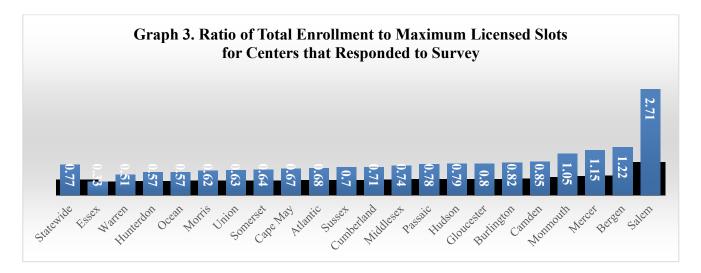

**Table 3 in Appendix A** presents the surveyed centers' number of slots by age group and county, which indicate three counties - Bergen, Essex and Union - had the largest combined slots for infants, toddlers, and preschoolers.

#### **Enrollment**

The data illustrated in **Table 4 in Appendix A** shows the total enrollment specific to child age group, by county among the centers that provided the data. Bergen, Hudson, Passaic, Middlesex and Union counties had the largest total enrollment of children.

In some cases, the total enrollment for a county can exceed the maximum slots due to combining both full-time and part-time enrollments numbers. Therefore multiple part-time enrollments may be equivalent to 1 full-time enrollment.

**Graph 3 below** demonstrates the ratio of total enrollment combining infants, toddlers, and preschool children to maximum slots in the licensed centers that responded to the survey. Across the state, the ratio was 0.77, indicating that the total enrollment was lower than the maximum capacity in the licensed centers. While it was the case for most counties, for the following four counties –Monmouth, Mercer, Bergen, and Salem- the ratio exceeded 1. However, due to the low survey response rate and small sample size, it would be inaccurate to use the ratio as an indicator of supply shortage of child care services.

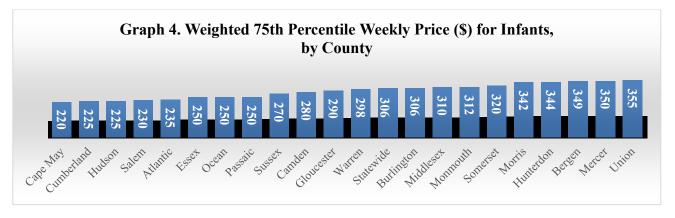

### **Section 3: Price Variation by County**

Both weekly and monthly price modes were collected. The monthly price mode was the most common pricing mode reported by centers. More than 90% of the centers, regardless of the child age group reported they collected monthly tuition. Pricing mode, by child age groups is detailed in **Table 5 in Appendix A.** 

#### Weekly Prices

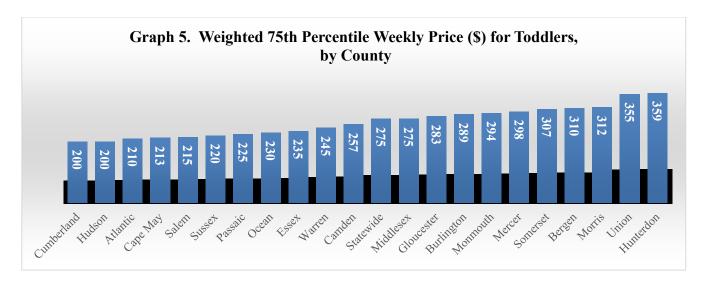

Statewide and county level 50<sup>th</sup> and 75<sup>th</sup> percentile weekly prices for full-time care for infants, toddlers, and preschoolers are represented in **Table 6 in Appendix A**. All these representative prices were weighted with the number of maximum licensed slots in child care centers.

**Graph 4** visualizes the findings in Table 6 and also ranks the counties by the representative prices.

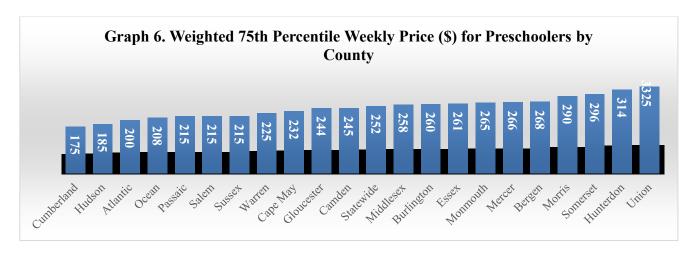

As Graph 4 shows, the statewide 75<sup>th</sup> percentile weekly price for infants was \$306. Four counties - Gloucester, Warren, Burlington, and Middlesex - had their 75<sup>th</sup> percentile prices similar to the statewide prices. Four other counties – Cape May, Cumberland, Hudson, and Salem – had the lowest 75<sup>th</sup> percentile weekly prices for toddlers at around \$220-230. On the other spectrum, Hunterdon, Bergen, Mercer, and Union counties had the highest 75<sup>th</sup> percentile weekly prices at \$310-\$359.

The statewide 75<sup>th</sup> percentile weekly price for toddlers was \$275, visualized in **Graph 5 below**, and was lower than the price for infants. The price ranges between the lowest of \$200 in Cumberland and Hudson counties and the highest of \$355 in Union and \$359 in Hunterdon counties. Unlike the prices for infants, the two highest 75<sup>th</sup> percentile prices for toddlers were at least \$40 more than the next highest prices.

As **Graph 6 below** presents, the 75<sup>th</sup> percentile weekly prices for preschoolers were estimated to be \$252 for the entire state. The price ranged between \$175 in Cumberland county and \$325 in Union county. The same groups of counties consistently made up the counties with the lowest and highest prices throughout all the price analyses for infants, toddlers, and preschool care.

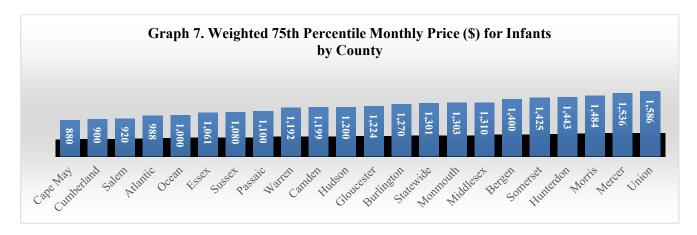

#### **Monthly Prices**

**Table 7 in Appendix A** presents the 50<sup>th</sup> and 75<sup>th</sup> percentile monthly prices for infants, toddlers, and preschoolers both for the entire state and by county. The prices were weighted with the number of slots

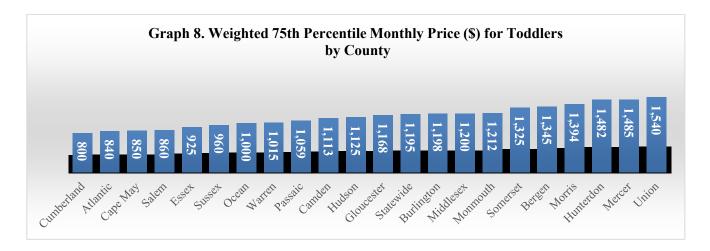

approved for the licensed centers in order to give appropriate weight to centers with a large capacity.

The table reports that the 50<sup>th</sup> percentile monthly prices were \$1,040 for infants, \$940 for toddlers and \$845 for preschool care. The 75<sup>th</sup> percentile were more than \$200 higher than the 50<sup>th</sup> percentile prices - \$1,300 for infants, \$1,195 for toddlers, and \$1,055 for preschoolers. **Graph 7, 8, and 9** show the 75<sup>th</sup> percentile monthly prices for each age group by county and how counties are ranked on the price spectrum.

**Graph 7** below shows that Burlington, Monmouth, and Middlesex counties have their 75<sup>th</sup> percentile prices for infants similar to the state-wide prices of \$1,300, while Cape May, Cumberland, and Salem counties had the lowest prices at around \$900; and Morris, Mercer and Union counties had the highest prices at near \$1,500-1,600.

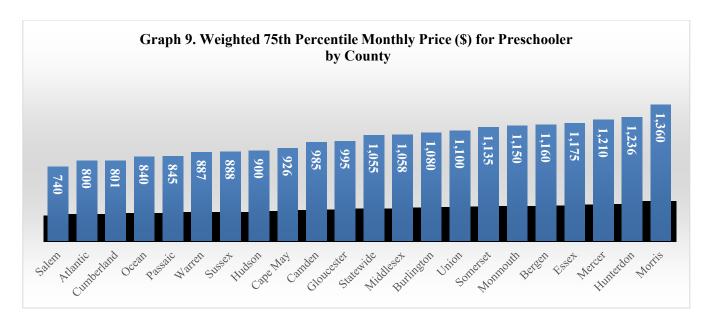

**Graph 8 below** reports that the 75<sup>th</sup> percentile monthly prices for toddlers were lower than the prices for infants. Again, four counties - Gloucester, Burlington, Middlesex, and Monmouth counties - had the prices closest to the state-wide price at around \$1,200. Cumberland county had the lowest price for toddlers at \$800, which was nearly \$700 lower than Hunterdon, Mercer, and Union counties.

The monthly prices for preschool care were much lower than the prices for toddlers. As **Graph 9** below depicts, the least and most expensive counties remains relatively the same with the exception of Salem

county with the lowest monthly prices at \$740 and Morris county the highest prices at \$1,360 for toddlers.

### **Section 4: Price Variation by Price Cluster**

#### **Price Clusters**

Based on the quartile distributions of weekly and monthly prices by zip code in our data, we created four price clusters using the following cutoff prices in the table below. For example, if a child care center charges between \$226 and \$260 weekly for infant care, the center was assigned 2<sup>nd</sup> price cluster for infant care. We also presented the list of matched counties, cities, zip codes, and price clusters for all zip codes in **Appendix B.** 

Weekly and Monthly Price (\$) Range for Price Cluster by Child Age Group

	Cluster	Infants	Toddlers	Preschoolers	School-Age
Weekly	1 (lowest)	225 or below	222 or below	185 or below	75 or below
	2	226-260	223-245	186-220	76-103
	3	261-318	246-295	221-265	104-150
	4 (highest)	319 or above	296 or above	266 or above	151 or above
Monthly	1 (lowest)	925 or below	823 or below	733 or below	311 or below
	2	926-1,150	824-1,018	734-915	312-433
	3	1,151-1,374	1,019-1,256	916-1,115	434-552
	4 (highest)	1,375 or above	1,257 or above	1,116 or above	552 or above

**Table 8 in Appendix A** displays the 50<sup>th</sup> and 75<sup>th</sup> percentile *weekly* prices for full-time child care by child age group and by price cluster.

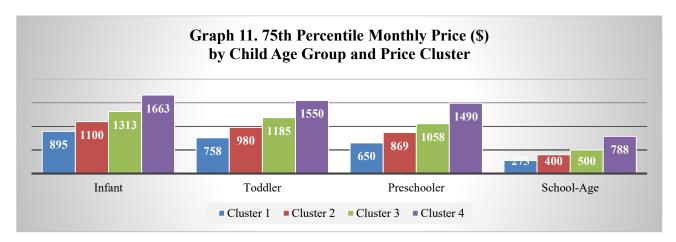

**Table 9 in Appendix A** shows the 50<sup>th</sup> and 75<sup>th</sup> percentile *monthly* prices in the same way.

#### Weekly & Monthly Price Variations by Price Clusters

Graph 10 visualizes the 75<sup>th</sup> percentile weekly prices by price cluster displayed in **Table 8 in Appendix** A.

**Graph 11 below** visualizes the 75<sup>th</sup> percentile *monthly* prices by price cluster displayed in **Table 9 in Appendix A.** 

Overall, the graphs above illustrate that prices decline by age group with infant care costing the most and school age care costing the least regardless of price clusters.

### **Section 5: Price Variation by Quality Indicator**

#### By Accreditation Status

The percentages of centers that were accredited were 16% for those serving infants, 15% for those serving toddlers, and 14% for those serving preschoolers. About half of those accredited centers were accredited by National Association for the Education of Young Children (NAEYC). Not all centers that reported to be accredited provided the names of their accrediting bodies.

**Table 10 in Appendix A** shows the weighted 50<sup>th</sup> and 75<sup>th</sup> percentile monthly prices by accreditation status for all child age groups. Because not all accredited centers in the survey data provided their prices,

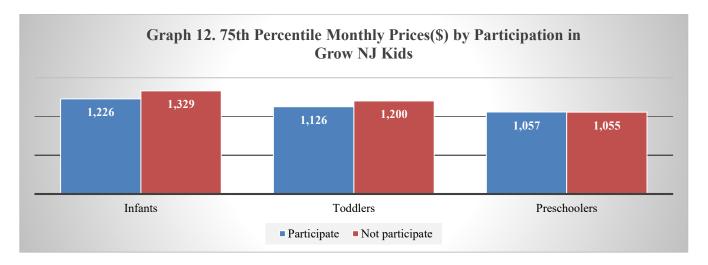

the sample sizes for the price estimations were rather small as noted in Table 10 (N=120 for infants, N=131 for toddlers, and N=177 for preschoolers).

#### By Participation in Grow NJ Kids

Grow NJ Kids is the State's new quality rating and improvement system designed to raise the quality of child care and early childhood education by providing support and resources to programs and technical assistance, professional development training and opportunity to the workforce.

The limited administrative data for Grow NJ Kids was examined in conjunction with this analysis. Not all centers enrolled in Grow NJ Kids system provided survey price data, limiting the sample sizes. For example, 283 centers serving infants participated in Grow NJ Kids but only 170 provided their price data; 319 centers serving toddlers participated in the system but only 200 provided their prices; and 250 out of 360 centers serving preschoolers participated in the system provided their price data.

**Graph 12** below visualizes variations in the 75th percentile monthly prices by Grow NJ Kids participation status. Despite small differences, the graph below shows that centers that participated in Grow NJ Kids had lower prices than those that did not. **Table 11** in Appendix A shows the weighted 50<sup>th</sup> and 75<sup>th</sup> percentile monthly prices by participation in Grow NJ Kids.

### **Section 6: Child Care Supply**

School districts data were used as the boundary of these analyses because the data of the number of children under age 6 were available by school district on the Department of Education website. The GIS map data of a total of 440 school district boundaries from New Jersey Geographic Information Network (NJGIN) were used for the analyses.

To get the maximum numbers of slots across the state, GIS map data of: (1) 3,914 licensed child care centers as of 2017, (2) 1,808 registered family providers as of 2016, (3) 306 public free child care providers as of 2017, and (4) 206 Head Start/Early Head Start program providers as of 2017 were combined. There were a total of 529,130 young children under age 6, for a total of 414,260 child care slots across the state.

By merging the number of young children and the number of child care slots, we calculated the ratio of the number of young children to the number of child care slots. The data represents as follows: (1) number of young children (under 6 years old); (2) number of slots in licensed child care centers; (3) ratio of the number of children to the number of center slots; (4) number of slots in all types of care providers; and (5) ratio of the number of children to the number of slots in all types of providers.

Using ArcMap Spatial Join Function, we also produced maps (see **Appendix E**) for the geo-analytics results to display geographic dispersion of young children and child care slots across school districts, (see **Table 15 in Appendix C**).

For the mapping, additional data obtained on population density from NJGIN and child poverty rates from the U.S. Census Bureau for each school district were used to overlap the population density and poverty data against child care slot data.

#### Child Care Supply Definition

Although the number of children under age 6 is the first and most important indicator of potential demand of non-parental child care service, factors that affect the level of demand are numerous including parents' employment, hours of work, work schedule, families' income, price of child care, availability of relatives and friends willing to care for children, cultural preferences, child characteristics, and some of them are not easily observable and measurable.

More importantly, most of these factors are also dynamically interrelated to one another, and the effect of one factor on childcare demand is not easily estimated, if not impossible. Nonetheless, academic literature documents that one of the most important determinants of demand for childcare is maternal employment.

For this study, we used the ratio of the number of young children under age 6 within a school district to a total number of slots available in any type of child care providers (licensed centers, registered family providers, public and free programs).

Additionally, child care supply gaps by school districts were defined using the following children to slot ratios; more than 3 to 1 = moderate supply gap, less than 3 to 1 = adequate supply, and more than 5 children per slot = significant supply gap, visualized in the chart below.

#### Statewide Distribution of Children-to-slots Ratio

Statewide Children-to-slots Ratio	Number of School Districts	Percent (%)
$0 < \text{Ratio} \le 3$	364	82.35
$3 < \text{Ratio} \le 5$	41	9.28
5 < Ratio	35	8.37
Total	440	100

As shown in the above table, more than 82% of school districts statewide had the ratio equal to and less than 3, suggesting that the majority of the districts with young children did not have a supply shortage.

Approximately 17% (76 of a total of 440) school districts included in the analyses had more than 3 children per child care slot.

As for areas with a potentially more severe child care supply issue, we identified that 35 school districts in 14 counties had the children-to-slots ratios greater than 5, such as Egg Harbor City in Atlantic county, Springfield in Burlington county and Mt. Ephraim in Camden county.

According to Bureau of Labor Statistics (<a href="https://www.bls.gov/news.release/famee.nr0.htm">https://www.bls.gov/news.release/famee.nr0.htm</a>, 2017), approximately 65% of mothers with children under 6 years old worked at paid jobs in 2016. Among those mothers who worked, nearly 30% of them worked part-time ranging from 1 to 34 hours weekly. When the principal investigator of this study analyzed a nationally representative sample of young children of working mothers using data from the U.S. Census Bureau's Survey of Income and Program Participation, approximately 41% of the children under age 6 were regularly cared for by center or family providers. This indicates that, across the country, about 27% of children below age 6 (0.27=0.65 x 0.41, nearly equivalent to children-to-child ratio of (4) are regularly cared for by center or family providers. Hence, we used the children-to-slot ratios of 3 and 5 as two cutoffs to identify geographic areas with a potential childcare supply shortage (as stated in the report, the ratio of 5 indicates a potential shortage of childcare supply). See **Appendix E Map 8**.

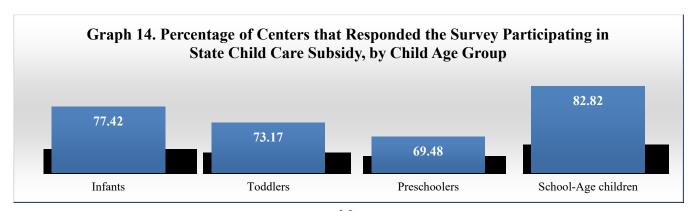

#### Child Care Supply Findings

- Child care supply shortage exists in less populous and/or poor school districts with limited resources, across the state.
- Most slots were highly concentrated in urban districts.
- Distribution of child care slots show that school districts with a child care supply shortage issue are concentrated in areas with a low population density, such as Burlington, Salem, Cumberland, and Atlantic counties.

## Section 7: General Survey Data Analysis and Findings

### Participating in State Child Care Subsidy by Child Age Group

The numbers depicted in **Graph 14** below show that high percentages of centers served children that received the state child care subsidy; 83% of the centers that cared for school-age children, 77% of those that cared for infants, 73% of those that cared for toddlers and 69% of those that served preschoolers.

**Table 12 in Appendix A** calculates the percentages of centers that served children in the state child care subsidy program among all the centers that responded to the survey.

#### **Participation Barriers**

Of all the reasons for nonparticipation in the subsidy program, the most predominant one (68%) was lack of families receiving the subsidy applying for their centers. Approximately 18% identified that the subsidy's low reimbursement rate was a reason for nonparticipation. See **Table 13 in Appendix A.** 

#### Special Fees

The most common special fee that more than three quarter of child care centers charged was registration fee, collected annually with the median amount of \$65.

#### Additional Incurred Cost

One of the survey questions asked if providers incurred cost to meet health and safety requirements by the New Jersey Child Care Subsidy Program. Approximately 23-24% of the centers that served infants, toddlers, and preschoolers responded that they had incurred the costs related to complying with the health and safety training requirements. The median payment amounts were \$475 for centers serving infants, \$400 for centers serving toddlers, and \$100 for centers serving preschoolers and school-age children.

### **Section 8: Recommendations**

For a market price study to guide the state child care subsidy program, it is critical that the state department has a system that collects accurate child care price data from all providers on a regular basis

- Child Care Resource & Referral (CCR&R) database should be updated within three months of market price study.
- Unified collaboration of CCR&Rs and the Office of Licensing to create a system that collects and updates child care prices on a regular basis for a future study.
- Standardization of the format and contents of various administrative data closely related to the child care subsidy program.
- Centralized data for locations and slots of public and free child care programs for child care supply shortage analysis.
- Comprehensive and in-depth data of Grow NJ Kids that captures the quality of child care service and used the program participation status as an indicator of child care quality.

With more detailed and longitudinal data for readily available program evaluation, a future market price study may be able to help estimate the market prices or costs associated with improving the quality of child care service.

## Section 6: Participation in State Child Care Subsidy

Table~12-Numbers~and~Percentages~of~Centers~and~Children~Participating~in~State~Child~Care~Subsidy,~among~Survey~Responders

	Infant	Toddler	Preschooler	School-Age
Total number of centers in the survey (2)	908	1,066	1,432	1,094
Number of centers participating in subsidy (1)	703	780	995	906
Percent (%) : [(1)/(2)] × 100	77.42	73.17	69.48	82.82

Table 13 - Percentages Not Willing to Participate in State Child Care Subsidy and Potential Reasons

	Number	Percent (%)
Not applicable or did not respond	261	13.61
Willing to participate	1,287	67.10
Not willing to participate	370	19.29
Total	1,918	100.00
Reasons for not willing to participate		
Reimbursement rate is less than the rate we charge	65	17.57
Subsidy does not come through timely	39	10.54
Subsidy does not reimburse based on enrollment	24	6.49
No family receiving subsidy that has applied	253	68.38
Other reasons	60	16.22
Total	370	100.00

### **Appendix D - School Districts Spatial Mapping**

#### **School Districts Map Visualizations represent the following:**

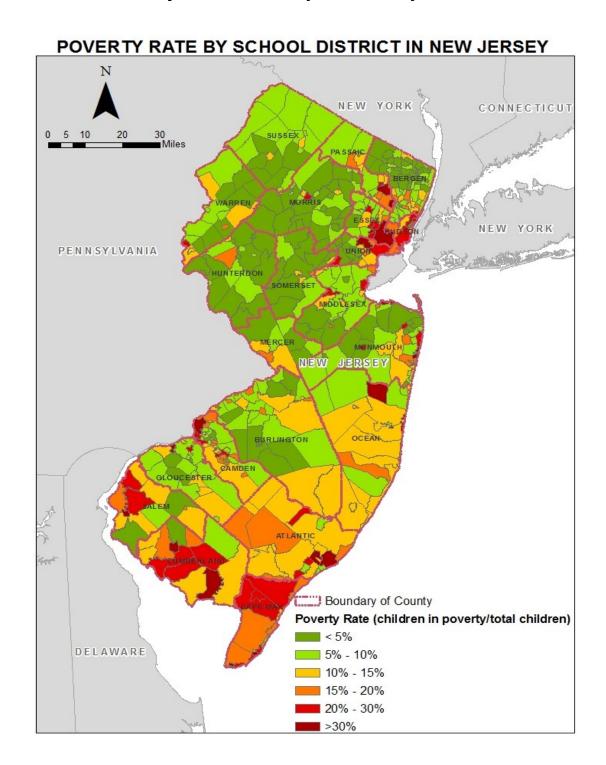

- O Map 1 in Appendix E shows that some districts of Burlington, Salem, Cumberland, and Atlantic Counties had the lowest population density, followed by Cape May and Sussex Counties. On the other hand, northeastern and central counties such as Bergen, Hudson, Morris, Essex, Union, Middlesex, Mercer, and Monmouth Counties had a high population density. Some southwestern parts of Burlington and Camden Counties also appeared to have a high density.
- O Child poverty rates color-coded in Map 2 in Appendix E clearly shows that the southernmost counties of the state that were least populated such as Salem, Cumberland, Cape May, and Atlantic Counties had the highest rates of poverty. As for northeastern counties, most of Hudson Counties and small parts of Passaic, Essex and Union Counties had a high poverty rate.
- o Map 3 in Appendix E shows that most slots in licensed child care centers were concentrated in Hudson, Bergen, Union, Essex, Somerset, Middlesex, and Mercer Counties. All of those counties are highly urbanized metropolitan districts. The map demonstrates that licensed child care slots were not evenly distributed across the state.
- The distribution of child care slots in registered family providers are displayed in **Map 4 in Appendix** E shows that the slots were mostly concentrated in some parts of Hudson, Essex, and Union Counties where a population density was high. However, the family providers' slots were also prevalent in relatively low-density districts such as parts of Cumberland, Cape May, and Ocean Counties.
- O Map 5 in Appendix E illustrates that publicly funded child care programs were concentrated in high-density urban districts, such as Jersey City, Newark, Paterson, Trenton, New Brunswick, Bridgeton, and Vineland. Head Start programs were more evenly dispersed. Although there were many Head Start slots in cities such as Camden, Newark, Trenton, and Jersey City, the slots were also available in a typical suburban, low-density area such as Hamilton Township in Atlantic County.
- o Map 6 in Appendix E displays the location of all types of child care slots across the state. When overlapped with the locations of high-density urban districts in Map 7 in Appendix E.
- o Map 8 in Appendix E shows the distribution of children to slots ratio.
